# Inspector Comment

RD 784 participates with the neighboring districts to strategically place flood fight supplies around the local districts for fast response. They also have a shipping container at their district office, and three containers at another district full of flood fight supplies.

### Inspector Comment

2003 - Bank is near vertical. Identified as a Potentially Critical site. 2004 - Eddy flow off downstream end of Modesto formation eroding the fluvial sediments. 2005 - Some new slumping. Actively eroding but berm width is greater than 50 ft. 2006 - Downgraded to regular erosion site. Still actively eroding. Large old rotational failures in high bank on the downstream end. 2008 - Removed from inventory due to wide berm width does not meet criteria for an erosion site. 2010 - Added back to the inventory after 10 ft of bank erosion in the winter 2009 storm. Steep vertical face. 2011 - Bank has retreated an additional 2.5 ft from last year. New tree popouts and erosion throughout the site. 2012 - Site continues to worsen with new tree popouts and many sections of new erosion. 2015: Last observed in 2013. [2015 Site ID: FHR\_17-8\_L]

### Inspector Comment

FS\_ID:52571 DS\_ID:18627 EP\_NO: N/A Repair Type: Urgent Crossing Status: Found

UCIP Comments: 11/30/2017 Crossing remains Urgent due to uncertainty of pipe condition through levee -- recommend an internal inspection of the pipe through the levee as a precaution measure to determine integrity of pipe. Repair of the rusted out collar (void) found at the WS pipe outlet has been repaired by the LMA. Received additional photos from DWR levee inspector, S. York, of the WS concrete headwall installed and vegetation cleared from WS. (O. Magana - DWR UCIP)07/13/2017 - The rusted out collar at the bottom of the waterside flap gate has been sealed with concrete. Internal pipe inspections still pending. (P.Meagher-RD784).04/13/2017 - Spoke to LMA representative, P. Meagher, regarding the status of this crossing. The report has been updated to indicate vegetation has been cleared from WS outlet and LS inlet. The crossing remains Urgent--WS pipe collar is rusted out on the bottom. Recommend internal pipe inspection to determine pipe integrity through the levee. Owner will need to coordinate with the CVFPB to address issue. (O. Magana - DWR UCIP)

01/16/2017 - Landowner who utilizes this pipe reported to RD784 staff on 1/11/2017 that he suspected this pipe at the waterside flap gate ring area was rusted out at the bottom. After investigating, we could see what was reported is correct. Sandbags have been temporarily placed around the 2" +/- gapped area underneath the flap gate ring. A permanent solution is anticipated to be completed in the next 3 to 6 months. The plan is to pour a concrete ring / headwall around the open corroded pipe end. Photos attached. (P. Meagher -RD784).11/04/2016 - Flap gate on waterside has been cleared again as of 10/17/2016. The LS inlet area has been cleared as of 9/21/2016. See updated photos attached. (P.Meagher - RD784)09/22/2016 vegetation at inlet of pipe has been cleared by owner. photos added showing pipe inlet. (T. Hatch - DWR UCIP)08/09/2016 - vegetation partially obscuring outlet on WS. Heavy vegetation on landside (LS) limiting inspection of inlet. Owner asked by RD0784 to clear vegetation and debris. (T. Hatch - DWR UCIP)11/1/2015 - Flap Gate has been cleared as of 12/9/2014 and again during summer of 2015 (P. Meagher/RD0784)2/27/2013 - Flap gate blocked by vegetation on WS toe. Unable to locate inlet. (W. Wylie - DWR UCIP) FIELD\_STRUCT\_DESC: 18-inch corrugated metal drainage pipe through the levee, 20 feet below the crown. Gate valve on the waterside (WS). [Additional Reference(s): USACE Sacramento O&M Manual 145, August 1955 (Station 4+96). USACE Sacramento As-built Drawings, 2-4-106, Exhibit B, Sheet 2, July 1944 (Station 4+96)].

Close up photo of concrete seal where the rusted out void used to be. Farmer irrigation was currently flowing at the time the photo was taken.

### Inspector Comment

FS\_ID:51707 DS\_ID:18587 EP\_NO: N/A

Repair Type: Non-Urgent Crossing Status: Found

UCIP Comments: On 1/31/2017 The waterside excess pipe end was discovered to be floating to the surface due to landside water runoff through the pipe. Because of the floating pipe, the water was not draining all the way through the pipe. Instead, the water was overtopping the levee shelf area. In order to resolve this issue, the excess portion of the pipe was cut off. After doing so, the water immediately started draining properly again. (P. Meagher, RD784 2/3/2017). Erosion at outlet may or may not be an issue. FIELD\_STRUCT\_DESC: 18-inch corrugated metal drainage pipe through the levee, 14.5 feet below the crown. Flap gate on the waterside (WS) end. Concrete U-shaped headwall on the WS. Polyvinyl chloride weir on inlet. [Additional Reference(s): DWR Levee Log, 2005. USACE Sacramento O&M Manual 145, August 1955 (Station 126+53)]. ### Inspector Comment

FS\_ID:52570 DS\_ID:18597 EP\_NO: N/A Repair Type: Urgent Crossing Status: Found

UCIP Comments: 11/30/2017 - same as previous inspection - crossing remains Urgent. Received updated photos from DWR levee inspector, S. York, showing current condition of levee LS and WS. (O. Magana -DWR UCIP) 12/15/2016 - Coordination email was received from RD0784 this afternoon. Patrick Meagher with Reclamation District is closely moritoning the eroded pipe area at the Horseshoe Levee due to periodic rainstorms and unpredictable water flow elevations. To avoid further damage at this location, Mr. Meagher has coordinated with LMA Consultant Sean Minard at MHM Engineering and DWR Levee Inspector Sterling York to address further deterioration at site. As a proactive measure by RD784, sandbags were used to fill in the sink hole on the WS. A "V" shape diversion dam was also built of sandbangs above the sinkhole area to help divert running rainwater coming down the slope around the fill area. RD0784 used approximately 100 sandbags at the site to fill in sink hole and create the "V" shaped diversion dam. (O. Magana - DWR UCIP)07/29/2016 - Erosion scarp on LS cut into levee shoulder starting at inlet headwall. Cavity failure on WS shoulder approximately 2-feet in diameter and several feet in depth. (T. Hatch/UCIP)11/01/2015 - The concrete box weir structure on the landside inlet has slumped off the end of the pipe. DWR Chief inspector George Wilie inspected the site on 8/13/2015 with Steve Fordice, General Manager of RD784. (P. Meagher - RD784)

2/27/2013 - Heavy erosion around inlet headwall due to beaver activity. (W. Wylie/UCIP)

FIELD\_STRUCT\_DESC: 18-inch corrugated metal drainage pipe through the levee, 15.5 feet below the crown. Flap gate on the waterside (WS) toe. Concrete U-shaped headwall on the WS toe. (Removable standpipe and bulkheads approved under Permit No. 9230, 1974 - Frach, Inc.). [Additional Reference(s): DWR Levee Log, 2005. USACE Sacramento O&M Manual 145, August 1955 (Station 13+72). USACE As-Built Drawing No. 2-4-106, Sheet 6, July 1944 (Station 13+72)].

### Inspector Comment

FS\_ID:51712 DS\_ID:18593 EP\_NO: N/A

Repair Type: Non-Urgent Crossing Status: Found

UCIP Comments: 11/14/2016 - Photos added of exposed flap gate on WS and possible inlet location on LS. Condition remains as Non-Urgent because of inlet not being fully operable. Unknown if pipe will operate as designed during high water or if it is full of sediment.11/01/2015 - Waterside Flap Gate Uncovered. Photo sent to DWR Matt Hoffman on 3/3/2014. Fresh photo sent to DWR Pavel Kazi on 9/9/2015. Landside toe has never been able to be located. Requesting DWR inspector to change the status of this issue to "No Action Needed". (P.Meagher - RD784). Pipe burried on LS toe and flap gate is blocked by soil on WS toe. (W. Wylie - UCIP Inspector).

FIELD\_STRUCT\_DESC: 18-inch corrugated metal drainage pipe through the levee, 10 feet below the crown. Flap gate on the waterside (WS) end. [Additional Reference(s): DWR Levee Log, 2005. USACE Sacramento O&M Manual 145, August 1955 (Station 91+50)]. FS Date: 10/9/2015
